Zeporah Workflow 6: First-Year Bereavement, Estate, Benefits, and Life-Administration Navigation

Version: 1.0 — Fully integrated product, operational, and handoff specification
Primary release context: Hospice and palliative-care pilot
Reusable contexts: Life insurers, health insurers, long-term-care insurers, banks and credit unions, wealth-management firms, estate-planning and probate practices, employers/EAPs, hospitals, senior living, funeral homes, faith communities, aging-services organizations
Primary user: Family Coordinator
Supporting users: Co-Coordinator, Family Helper, Family Viewer, approved Partner Support Team
Prerequisites: Workflow 1 — Family Onboarding, Consent, Roles, Permissions, and Visual Trust System; Workflow 2 — Serious Illness and Hospice-Care Preparation; Workflow 3 — Family Coordination, Communication, Tasks, and Documents; Workflow 4 — Caregiver Overwhelm, Compassionate Pause, and Human-Support Escalation; Workflow 5 — Immediate Post-Death Guidance and Funeral-Period Coordination

1. Workflow purpose

1.1 Family problem

After the immediate days following a death, the family's responsibilities often continue for months. A designated next of kin may need to manage grief while also locating documents, notifying institutions, organizing insurance or employer information, preparing for meetings with legal, tax, financial, or estate professionals, maintaining a home or property, caring for dependents and pets, handling personal belongings, and navigating anniversaries and difficult dates.

These activities do not follow a universal order. Some families have an executor, attorney, financial professional, employer benefit, insurance representative, or supportive relatives. Others have limited money, fragmented information, family conflict, or no clear person to ask. Many tasks are legally, financially, and emotionally sensitive.

Workflow 6 helps families organize and pace the **life administration** that may follow loss. It is not a probate, legal, financial, tax, claims-adjudication, or investment platform. It gives the family one private place to identify what may need attention, choose one next step, prepare questions and information for the right professional, delegate practical work with controlled access, access transparent support resources, and care for themselves through the first year.

1.2 Family value

The Family Coordinator should be able to say:

- “I do not have to resolve every responsibility at once.”
- “I can separate what is urgent, what can wait, and what I need a professional to help with.”
- “I can keep documents, contacts, questions, and tasks organized without giving everyone access to everything.”
- “I can ask the right professional for help without Zeporah pretending to give legal or financial advice.”
- “I can keep track of benefits, insurance, home, family, and remembrance tasks at my own pace.”
- “There is room for grief, anniversaries, and my own wellbeing—not only paperwork.”

1.3 Institutional value

For hospice and palliative-care organizations, Workflow 6 extends compassionate family support after clinical care ends. For insurers, banks, employers, EAPs, estate professionals, senior-living communities, funeral providers, and other institutions, it provides a respectful, family-controlled navigation layer around the narrow part of the journey each organization owns.

Potential value includes:

- Better prepared, more organized families when they contact the organization.
- Fewer repeat, misdirected, or incomplete nonclinical inquiries, subject to pilot validation.
- Clearer consented routing to beneficiary support, employer benefits, social work, bereavement, resource navigation, legal-information, or other appropriate teams.
- More compassionate member, beneficiary, client, employee, resident-family, or customer experience.
- Greater continuity: the organization can support the family at a major life transition without gaining access to private family content.
- Measurable request completeness, response time, resource relevance, family engagement, and satisfaction.

1.4 Scope

This workflow includes:

- Pacing the first-year journey with “Now, Next, Later” and time-sensitive but optional reminders.
- A configurable first-year timeline for immediate weeks, months 2–4, months 4–8, months 9–13, and significant dates chosen by the family.
- Grief, emotional, cultural, faith, spiritual, and caregiver support navigation.

- General life-administration task organization: institutions to contact, household/property, dependents/pets, mail/subscriptions, employer/leave, insurance/benefits, records and document readiness, and professional meetings.
- Questions-to-ask and information-to-gather prompts for legal, tax, financial, insurance, benefits, estate, banking, and other professionals.
- Controlled document/contact/task sharing and task-only delegation.
- Transparent resource recommendations and consent-based connections to approved support pathways.
- Anniversaries, birthdays, holidays, and user-selected difficult-date preparation.
- Workspace review, archive, and long-term access options.
- Privacy, safety, partner operations, audit, integration, and handoff rules.

1.5 Out of scope

Workflow 6 does not:

- Give legal advice; determine probate requirements; interpret a will, trust, deed, beneficiary designation, court order, debt, tax obligation, or estate authority.
- Give tax, financial, investment, banking, insurance-coverage, claim-eligibility, or benefits-eligibility advice.
- Submit a claim, open/close an account, transfer assets, file court documents, change property title, cancel services, pay bills, or make purchases on the family's behalf.
- Determine the authenticity, validity, or legal sufficiency of documents.
- Store passwords, PINs, Social Security numbers, full bank-account numbers, debit/credit card information, account access codes, or other credentials in standard notes or documents.
- Automatically contact any insurer, bank, employer, attorney, funeral provider, government agency, creditor, provider, or resource.
- Require families to complete any administrative task before accessing grief or practical support.
- Rank resources based on referral payments, lead sales, sponsorship, or paid placement.

2. Participants and responsibilities

Participant	Role in Workflow 6	Default authority
Family Coordinator	Sets pace, prioritizes tasks, controls access, decides what to preserve/share, approves external support requests, and manages archive choices.	Full control within Workflow 1 permissions
Co-Coordinator	Helps manage approved tasks, contacts, documents, and questions; may support the Coordinator across long-term responsibilities.	Configurable elevated access

Participant	Role in Workflow 6	Default authority
Family Helper	Completes selected practical tasks, sees approved information, and may ask private questions or request task help.	Assigned/shared scope only
Family Viewer	Receives selected updates or remembrance information without general administrative access.	Selected shared updates only
Partner Support Team	Receives only a specific family-approved request such as bereavement, benefits, beneficiary, EAP, social work, resource navigation, or other configured support request.	No default workspace access
Zeporah System	Organizes user-selected pathways, tasks, contacts, questions, reminders, resources, consent records, and archive options.	No legal, financial, tax, claims, or decision-making authority

3. Core design principles

3.1 One next step, not an estate checklist

A family should not face a large checklist of banks, insurers, creditors, probate, property, taxes, and personal belongings on first entry. Zeporah begins with what the family says matters now and lets other items wait.

3.2 Organize questions; do not answer professional questions

Zeporah may say:

> "You may want to ask a qualified professional about this. Here are questions and information you may wish to prepare."

It may not say what a will means, whether probate is required, how to file a claim, whether a debt is owed, which investment decision to make, or what a user legally must do.

3.3 The family owns its pace

Tasks can be marked "not now," deferred, hidden temporarily, delegated, or archived. User-selected dates are invitations to revisit, not deadlines imposed by Zeporah.

3.4 Keep grief and administration together—but not confused

The workflow recognizes that a family may need grief support while addressing paperwork. It offers grief, spiritual, practical, and emotional support alongside administration, without treating grief as a task to complete or paperwork as a measure of progress.

3.5 Separate organization from authority

The person who organizes the workspace may not be an executor, beneficiary, legal representative, or person with power to act on an account. Zeporah roles are collaboration roles, not legal designations.

3.6 Resource neutrality and transparency

Resources appear because of family-selected needs, locations, preferences, and verified availability—not commercial compensation. Zeporah clearly labels whether a resource is public, nonprofit, partner-provided, virtual, local, commercial, or otherwise affiliated.

4. Entry conditions and triggers

4.1 Primary entry triggers

- Family Coordinator selects “Life after loss,” “Keep important information together for later,” or an administrative/bereavement item in Workflow 5.
- Family begins Zeporah after a death and selects “We are navigating life after a loss” in Workflow 1.
- Coordinator opens a preserve-for-later item, reminder, task, document, contact, or support card configured for later-life administration.
- A participating employer, insurer, bank, attorney practice, hospice, or other organization offers an optional Zeporah entry path; family chooses to start.
- Coordinator selects a user-chosen anniversary, birthday, holiday, or difficult-date support reminder.

4.2 Re-entry triggers

- User returns to deferred task.
- User-selected “revisit” date occurs.
- Helper completes or requests help with task.
- Coordinator receives a document/contact access request or private family question.
- A consented partner support-request status changes.
- Family reaches a self-selected time marker, such as one month, six months, birthday, holiday, or first anniversary.

4.3 Entry rules

- Workflow 6 can start directly; it must not require use of Workflow 2 or Workflow 5.
- If prior data exists, preserve access controls and present only relevant, permitted information.
- Time since death must not be inferred from a partner record. The family may choose not to enter or display a date.
- Significant-date prompts require opt-in or a date the family deliberately provides. Never assume a religious calendar, family tradition, or anniversary response.
- Entry through a partner does not grant the partner workspace access or establish authority over the family’s tasks.

5. Workflow overview

```
Enter “Life after loss” at the family’s chosen time
        ↓
Choose one area that matters now
        ↓
Organize one task, one contact, one question, or one support need
        ↓
Keep items private or delegate only what another person needs
        ↓
Prepare for the appropriate professional or resource when desired
        ↓
Save, defer, or hide anything that can wait
        ↓
Receive optional support around grief and difficult dates
        ↓
Review, archive, or continue the family space over time
```

This is a flexible, non-linear path. A family may use only grief support, only practical task coordination, only document organization, or any combination. No user is required to engage with estate, insurance, legal, banking, or financial topics.

6. Screen-by-screen workflow

Screen 1: Life-after-loss welcome

Trigger

Coordinator enters Workflow 6 by choice, later-pathway link, preserve-for-later item, or user-selected reminder.

Goal

Set pacing and boundaries before introducing categories.

User-facing content

Title: “One step at a time”

Body:

“Life after a loss can bring both practical responsibilities and difficult moments. You do not have to handle everything today. Zeporah can help you choose one next step, keep information organized, and find the right kind of support when you want it.”

Boundary message:

“Zeporah can help you organize questions and information. It does not provide legal, tax, financial, investment, insurance, or benefits advice.”

Actions

- “Choose one next step.”
- “See what I saved for later.”
- “Find grief or family support.”
- “I am not ready right now.”

System behavior

- “Not ready” saves entry state and returns to dashboard; no automatic reminder unless user chooses one.
- No category is preselected.
- No large checklist or timeline appears automatically.

Screen 2: Choose one area that matters now

Goal

Let family define their own priority and avoid administrative overload.

User-facing content

Title: “What would be most helpful today?”

Prompt: “Choose one. You can return to the others whenever you are ready.”

Choices

- “Find grief, emotional, spiritual, or family support.”
- “Keep important information and documents organized.”
- “Prepare for a conversation with an insurer, employer, bank, attorney, or another professional.”
- “Manage a home, property, household, dependents, or pets.”
- “Handle a practical task or notify an institution.”
- “Plan for a difficult date, holiday, birthday, or anniversary.”
- “Share an update or ask a family member to help.”
- “I am not sure where to start.”

Response matrix

Choice	Next pathway
Grief/emotional/spiritual/family support	Screen 10: support options
Documents/information	Screen 5: information hub
Professional conversation	Screen 6: prepare for professional conversation
Home/property/dependents/pets	Screen 7: practical life tasks
Practical task/notify institution	Screen 7 and Screen 8: institution-notification organizer
Difficult date	Screen 9: remembrance and difficult-date support
Family help/update	Workflow 3 coordination surface
Not sure	Screen 2A

Save behavior

Priority becomes editable private “Now” card; no notification is sent.

Screen 2A: Gentle guided choice

Trigger

User chooses “I am not sure where to start.”

User-facing content

Title: “That is okay”

Body:

“You do not need to know the whole path. You can begin with one small thing, ask for support, or leave this for later.”

Choices

- “Write down one question for a professional.”
- “Choose one practical task.”
- “Find someone to talk to.”
- “Save one document or contact.”
- “Plan for a date that may be difficult.”
- “Save and return later.”

System behavior

- Routes to selected area.
- Save returns to dashboard and suppresses proactive nonessential prompt for 24 hours unless user reopens.

Screen 3: First-year pathway dashboard

Goal

Provide an optional, flexible time view without treating grief or administration as a prescribed schedule.

User-facing content

Title: “Your path, at your pace”

Body:

“Some families find it helpful to group responsibilities over time. This is optional. You can choose what matters now and hide anything that does not.”

Time sections

- **Now:** User-selected priority and active tasks.
- **Coming weeks:** Optional practical follow-up, support, and information organization.
- **When you are ready:** Benefits, accounts, professional conversations, property, belongings, and other later tasks.
- **Dates that matter:** User-selected birthdays, anniversaries, holidays, cultural/religious dates, or personal reminders.
- **Completed or archived:** Items the family chooses to keep for reference.

Time guideline cards

Cards are labeled as optional, not directives:

- “The first few weeks: support, household continuity, and information you may want to keep together.”
- “Months 2–4: choose any benefits, account, property, or professional questions you are ready to organize.”
- “Months 4–8: revisit unresolved tasks, belongings, household, support, and family needs if useful.”
- “Months 9–13: prepare for dates that matter, review unfinished tasks, and decide what to keep or archive.”

Actions

- “Choose a task for today.”
- “Add a date that matters.”
- “Hide this time section.”
- “Return to dashboard.”

System behavior

- No automatic release of tasks based solely on elapsed time.
- User controls time sections and reminders.
- Partner sees no timeline, dates, or stage information.

Screen 4: Today, next, later dashboard

Goal

Provide a calm operational view of the family’s current selected work.

User-facing content

Title: “What matters today”

Subtext: “Choose one step. Everything else can wait.”

Sections

Today

- One primary priority.
- Up to two active tasks user chose to see.
- One optional support action.

Next

- Deferred questions, contacts, tasks, or documents user elected to revisit.

Later

- Hidden/deferred items and optional pathway suggestions.

Remembering and support

- User-selected difficult-date reminder or saved support resource.

Private and shared

- Labels: Private, Shared with [name], Assigned to [name], Request sent.

Actions

- “Add a task.”
- “Add a question.”
- “Add contact.”
- “Add document.”
- “Find support.”
- “Review people and access.”
- “Save and return later.”

Status rules

- No scores, streaks, completion percentage, red overdue labels, or countdowns.
- Passed user-selected date asks: “Would you like to keep this, choose another time, complete it, or remove it?”
- Family can hide any nonurgent section.

Screen 5: Information hub and document readiness

Goal

Help family organize and locate information without requiring uploads or claiming legal/financial sufficiency.

User-facing content

Title: “Keep important information together”

Body:

“You can make a private list of information that may be useful later. You do not need to gather everything today, and Zeporah cannot tell you what is legally required.”

Optional information categories

- Family, care, and bereavement contacts.
- Employer, school, leave, EAP, or benefit contacts.
- Insurance, beneficiary, or claim-support contacts.
- Bank, credit-union, retirement, or wealth-management contacts.
- Legal, tax, estate, or probate professional contacts.
- Household, property, utility, mail, subscription, or digital-service information.
- Dependent, pet, vehicle, or business-related information.

- Important documents or questions to bring to a professional.
- Personal stories, photographs, remembrance items, or family records.

Per-item actions

- “I have this.”
- “I need to find this.”
- “I want to save a contact.”
- “I want to save a document.”
- “Ask someone to help.”
- “This does not apply.”
- “Not now.”

System behavior

- “I have this” does not require upload.
- “Need to find” creates private/delegated task with no imposed deadline.
- “Save document” uses Workflow 3 document privacy rules and credential warning.
- “Ask someone” uses task-only delegation and separately selected item access.
- Zeporah does not parse, interpret, verify, or determine legal value of documents.

Document privacy reminder

“Do not store passwords, PINs, full account numbers, Social Security numbers, access codes, or other credentials here. Store only documents you are comfortable keeping in this private space.”

Screen 6: Prepare for a conversation with a professional

Goal

Help the family organize questions and materials for the appropriate professional while preserving boundaries.

User-facing content

Title: “Prepare for a conversation”

Body:

“Zeporah cannot give professional legal, tax, financial, insurance, or benefits advice. It can help you collect questions, organize information, and find the right type of support.”

Choose conversation type

- “Insurance or beneficiary support.”
- “Employer, leave, school, or EAP support.”
- “Bank, credit union, retirement, or wealth-management support.”
- “Attorney, legal aid, estate, probate, or tax professional.”
- “Government, public-benefit, veteran, or community program.”
- “Funeral, cemetery, memorial, or property-related provider.”
- “Other professional.”

For each chosen type: question organizer

Question fields:

- “What do I need help understanding?”
- “What documents or information do I already have?”
- “What information might I need to locate?”
- “Who in the family should be included in this conversation?”
- “Would I like to request a connection, contact independently, or save this for later?”

Neutral question prompts

Show only as optional prompts and label them as questions to take to a professional.

Insurance/benefits:

- “What documents or information do you need from me?”
- “What is the next step in your process?”
- “Who can explain the status or timeline for this request?”

Employer/EAP:

- “What leave, bereavement, employee-assistance, or benefits resources are available?”
- “Who should I contact about next steps?”

Bank/financial institution:

- “What documentation or appointment is needed to discuss this account or relationship?”
- “Who is the right contact for estate or beneficiary questions?”

Attorney/legal/tax professional:

- “What information should I bring to an initial conversation?”
- “What questions should I prepare about the process and my role?”
- “What deadlines, if any, should I ask you about?”

Government/community/veteran:

- “Which program or office is appropriate for my question?”
- “What documents do they generally ask families to have available?”

Actions

- “Save questions privately.”
- “Turn this into a task.”
- “Share with selected family.”
- “Find general information or resources.”
- “Contact independently.”
- “Request a connection.”
- “Not now.”

System behavior

- Questions remain private by default.
- “Contact independently” shares no data.
- “Request connection” opens Screen 11; the app never sends questions/documents unless user separately selects them in a future dedicated flow.
- If user types a direct legal/financial/insurance question, show: “A qualified professional is the best person to answer this. Would you like to save it for a conversation or find the right type of support?”

Screen 7: Practical life tasks and institution notifications

Goal

Organize selected practical responsibilities without claiming a universal order or legal requirement.

User-facing content

Title: “Choose one practical responsibility”

Body:

“Different families need to handle different things. Choose only what matters to you now. You can defer, delegate, or hide any item.”

Categories

- Home, property, utilities, mail, subscriptions, and digital services.
- Dependents, child care, school, and caregiver responsibilities.
- Pets and animal care.
- Vehicle, travel, transportation, or storage.
- Belongings, personal items, photos, and family records.
- Work, business, volunteer, or community responsibilities.
- Insurance, benefits, memberships, and account notifications.
- Public agencies, veteran services, or community programs.
- Other.

Task fields

- Title.
- Optional details.
- Suggested timing: Today / This week / When ready / Select a date.
- Owner: Me / Specific person / Leave unassigned.
- Visibility: Only me / Assigned person / Specific people / All Helpers.
- Related contact/document/question, only with permission check.
- “This task feels too large.”

Actions

- “Create task.”
- “Break into smaller steps.”
- “Ask someone to help.”
- “Find support.”
- “Save for later.”

Institution-notification organizer

For user-selected categories such as insurer, employer, bank, utility, membership, or agency, Zeporah offers a neutral record:

- Organization name.
- Why the family wants to contact them.
- Contact method.
- Date family contacted them, optional.
- Next action, optional.

- Questions to ask.
- Document readiness status.

Boundary: “Zeporah can help you track that you want to contact an organization. It does not contact them for you, determine what they require, or decide what you should say.”

System behavior

- No automatic notices to institution.
- No claim/account action is taken.
- Existing task rules, delegation, item access, and pause path apply.

Screen 8: Practical task detail and follow-up log

Goal

Give family a private, simple way to remember their own outreach and next actions without presenting it as an authoritative legal or claims record.

User-facing content

Title: Task or organization name

Body:

“Use this space to keep your own notes about what you want to do next. For official guidance, contact the organization or a qualified professional.”

Optional fields

- Contacted? Not yet / Contacted / Waiting / Complete / Not applicable.
- Date family contacted, optional.
- Contact name/department, optional.
- Family-entered note, optional.
- Next step, optional.
- Reminder choice, optional.
- Related document/contact/question, with separate access controls.

Actions

- “Save update.”
- “Add a question.”
- “Ask someone to help.”
- “Find support.”

- “Save and return later.”

System behavior

- Family-entered notes are not verified by organization and remain private by default.
- No automatic claim/status synchronization or professional conclusion.
- Reminder only at user-selected time and channel.

Screen 9: Remembrance, difficult dates, and wellbeing support

Goal

Make space for grief and remembrance through the first year without assuming the family wants a specific ritual or emotional response.

User-facing content

Title: “Dates and moments that matter”

Body:

“Some days may feel harder than others. You can add a date, save a remembrance, invite support, or choose not to receive reminders.”

Optional date types

- Birthday.
- Anniversary of death.
- Holiday.
- Cultural or religious date.
- Special event or family tradition.
- Personal date.
- “I do not want to add dates.”

Optional actions

- “Add a private reminder.”
- “Ask someone to check in.”
- “Plan a small remembrance.”
- “Save a story, photo, or note.”
- “Find grief, spiritual, or community support.”
- “Turn off date reminders.”

Reminder setup

User chooses:

- No reminder.
- A few days before.
- On the date.
- After the date.
- A custom date/time.

User can choose private reminder only, a request to a selected family member, or a support-resource suggestion. No one is notified without explicit selection.

System behavior

- Do not infer anniversary from stage date unless user explicitly enters/chooses it.
- No “milestone completion” or pressure to move on.
- Photos/notes remain private by default.
- “Ask someone to check in” uses Workflow 3 controlled task/update or direct permission-limited request.

Screen 10: Grief, family, practical, and professional support options

Goal

Present small, transparent support set based on stated need, not assumptions.

User-facing content

Title: “Support that may help right now”

Body:

“You can choose support for grief, practical responsibilities, family coordination, work and benefits, or finding the right professional. You can save options, contact them yourself, hide them, or request a connection. Nothing is shared unless you choose to send a request.”

Support categories

- Hospice bereavement support.
- Grief counselor or support group resource.
- Chaplain, clergy, faith, spiritual, cultural, or community support.
- Social worker/resource navigator.
- Caregiver/family support.

- Practical help: meals, transportation, home, child/dependent, pet, or volunteer support.
- Employer/EAP/leave/benefits support.
- Insurer member/beneficiary support.
- Legal aid, attorney directory, public court/resource information, or tax-professional directory.
- Financial counseling or consumer/benefit navigation resource, not investment advice.
- Veteran, aging-services, public-benefit, or nonprofit support.

Resource card requirements

Each card displays resource name, category, help description, why shown, relationship classification, verified cost/access/language/accommodation indicators where available, and actions Save/Hide/Contact independently/Request connection.

System behavior

- Maximum four cards initially.
- No provider ranking influenced by payment or referral arrangement.
- “Contact independently” shares no family data.
- “Request connection” opens Screen 11.
- “Hide” suppresses resource according to recommendation rules; optional reason is private.

Screen 11: Request a support or professional connection

Goal

Support explicit, minimum-necessary, recipient-specific consent before any external contact request.

User-facing content

Title: “Request a connection”

Body:

“Zeporah can send a request to [recipient]. You decide what to share. Private notes, documents, family updates, tasks, contacts, and information you do not select will not be included.”

Required fields

- Request type:
  - Hospice bereavement support.
  - Social worker or resource navigation.

    - Chaplain/clergy/spiritual care.
    - Grief support or group resource.
    - Practical family support.
    - Employer, leave, EAP, school, or benefits support.
    - Insurer member, beneficiary, or claim-support contact.
    - Bank, credit union, retirement, or wealth-management support contact.
    - Attorney, legal aid, estate/probate/tax professional directory or initial-contact resource.
    - Veteran, public-benefit, aging-services, community, or nonprofit support.
    - Funeral/memorial/cemetery resource information.
    - Help understanding who to contact.
    - Other.
- Preferred contact method.
- Preferred contact time.

Optional fields

- Preferred language.
- Optional user-written message.
- Optional broad topic: grief, benefits, practical support, information organization, professional conversation, property/household, difficult date, other.
- Permission to leave voicemail/message.

Share preview

Will be shared

- Coordinator/requestor name.
- Selected request type.
- Preferred contact method/time.
- Preferred language if selected.
- Optional broad topic if selected.
- Optional message written by user.

Will not be shared

- Private notes or documents.
- Family Updates.
- Task lists, task details, status, or task history.
- Contact directory.

- Family member names, roles, or private questions.
- Account/policy numbers, legal documents, or financial information unless a future separate and explicit document-sharing flow is built.
- Recommendation browsing/saving/hiding history.
- Any information not selected.

Actions

- “Send my request.”
- “Save draft.”
- “Cancel.”

System behavior

- Require explicit acknowledgment: “I understand Zeporah will send the information listed above to [recipient].”
- Create consent/audit record with recipient, fields, timestamp, consent version, request ID.
- Route only approved fields to configured queue/resource.
- Family sees plain status and may withdraw before handling where possible.
- Request does not authorize ongoing external access or future data sharing.

Screen 12: Review, archive, and keep your family space

Goal

Give family control over what remains active after the immediate and first-year period.

User-facing content

Title: “Your family space, your choice”

Body:

“You can keep this space available, archive selected items, export information you are allowed to access, or return whenever you need it. There is no required end date.”

Sections

- Active tasks and reminders.
- Deferred/hidden items.
- Completed tasks and saved information.
- Shared people and access review.
- Saved resources and request history.

- Personal remembrance items.

Actions

- “Keep this space active.”
- “Archive selected items.”
- “Review people and access.”
- “Export my available information.”
- “Delete selected personal items,” subject to retention policy.
- “Turn off reminders.”
- “Return later.”

System behavior

- Archive hides items from daily view but preserves them according to user choice/retention policy.
- Archive does not change access retrospectively; Coordinator can review/revoke access first.
- Export requires recent authentication and includes only items current user may access.
- Warn that exported/downloaded files may be less protected outside Zeporah.
- Do not automatically close a workspace after 13 months.

7. Decision and branching logic

7.1 Family is not ready for administration

- Allow grief/practical support only.
- Let user hide all administrative categories.
- Do not show repeated estate/benefit prompts for at least 30 days after user selects “Not now,” unless user opens them.

7.2 Family needs a professional but does not know which type

- Offer “Help understanding who to contact.”
- Ask only broad category: legal/estate, tax, insurance/benefits, employer, banking/financial institution, property, public benefits, other.
- Show transparent general resource types or consent-based navigation contact.
- Do not determine which professional is legally required.

7.3 User asks direct legal/financial/claim question

Show:

“Zeporah cannot answer that question directly. A qualified professional or the responsible organization can help. Would you like to save this question, prepare for a conversation, contact them independently, or request a connection?”

7.4 Family member needs only one document/contact

- Use Workflow 3 item-level sharing.
- Give only selected document/contact access.
- Do not grant broader life-administration access.
- Helper download remains off by default.

7.5 Family has no attorney, insurer contact, employer benefit, or financial resource

- Offer public, nonprofit, community, legal-aid, aging-services, veteran, consumer, or other configured resources where available.
- Do not imply availability, eligibility, or free service until verified.
- Offer save/return without pressure.

7.6 Family conflict or authority uncertainty

- Maintain Coordinator-controlled access but clarify that Zeporah does not establish legal authority.
- Support private task assignment, limited document sharing, and professional-question preparation.
- Offer social work/family support or legal-information navigation where configured, with consent.
- Do not mediate dispute, decide authority, or share private statements.

7.7 Reminder date becomes painful or irrelevant

- User can disable, postpone, change, or remove any reminder.
- Do not repeat a disabled reminder.
- Difficult-date reminders never notify another person without explicit user selection.

7.8 Partner service is unavailable

- Show neutral unavailable status.
- Offer independent contact, public/nonprofit alternative, save for later, or other approved resource.
- Do not route to unrelated commercial provider.

7.9 User is overwhelmed

- Route to Workflow 4; preserve current task/question/document state.
- Offer small step, delegation, hide/return, support, or consented request.

8. Permissions and privacy rules

8.1 Object-level visibility

Object	Default visibility	Potential sharing
Life-after-loss priority	Coordinator only	None unless converted to task/update
Professional question list	Creator/Coordinator only	Selected people if explicitly shared
Information readiness item	Coordinator only	Assigned person/specific people if task created
Practical life task	Coordinator only	Assigned person/specific people/all Helpers
Institution follow-up note	Creator/Coordinator only	Selected people if explicit
Difficult date/remembrance item	Coordinator only	Selected people only if intentional
Document	Only me	Coordinator/Co-Coordinator/specific people/all Helpers
Support request draft/status	Coordinator only	Plain summary may be shared by Coordinator
Resource save/hide history	User/private context	Never shared by default

8.2 Sharing rules

- Every new item starts private.
- Document/contact/task attachments require separate permission checks.
- A task owner does not gain access to unrelated documents or professional questions.
- Sharing a difficult-date reminder with another person requires explicit recipient, message, timing, and confirmation.
- External connection requests require new recipient-specific, field-specific consent every time.

8.3 External boundaries

Insurers, employers, banks, attorneys, funeral providers, government agencies, hospice, and other partners do not see the family workspace, task list, documents, notes, questions, dates, access rules, or resource history by default. They see only explicit request fields approved by Coordinator.

9. Notifications and reminders

9.1 Principles

- Use only user-approved channels.
- No sensitive legal, insurance, financial, bereavement, account, document, task, or date details in notification previews.
- Respect quiet hours.
- Reminders are optional and user-controlled.
- Do not use countdowns, compliance language, or repeated “overdue” messages.

9.2 Notification catalogue

Event	Recipient	Default notification	Conditions
User-set task reminder	User	“When you are ready, one small next step is here.”	Selected date/time/channel
User-set difficult-date reminder	User	“A date you chose is coming up. Support is available if you want it.”	Explicit opt-in only
Task assigned	Helper	“You have a new task in a Zeporah family space.”	No detail in preview
Task completion/help request	Coordinator	“A task has an update.”	Detail after authentication
Private question/access request	Coordinator	“You have a private request to review.”	No content in preview
Document shared	Recipient	“A document was shared with you in Zeporah.”	No title/category preview
Support request sent	Coordinator/requestor	“Your support request was sent.”	Immediate
Support request status	Coordinator/requestor	“Your support request was acknowledged.”	Partner status
Archive/reminder confirmation	User	“Your reminder settings were updated.”	In-app default
Gentle return	User	“When you are ready, Zeporah is here.”	Only with consent/frequency setting

10. Compassionate pause and urgent-help boundary

10.1 Pause

Each nonurgent screen supports Save/Not now/return later. On pause:

“Your progress is saved. You can return when it feels right.”

No partner/family notification or inference. Route to Workflow 4 when user asks for help or task feels too large.

10.2 Urgent-help boundary

If user explicitly selects urgent help:

“If someone is in immediate danger or needs urgent medical help, call local emergency services now. If hospice support is relevant, you can also contact the hospice’s 24-hour line.”

Show verified line only. State: “Zeporah cannot monitor emergencies, provide emergency response, or determine what level of care is needed.”

No automated outreach, emergency call, location sharing, monitoring, clinical triage, or risk scoring.

11. Partner operational workflow

11.1 Pre-launch configuration

Every partner must configure organization/program identity, accepted request categories, verified contacts, destination queue/accountable role, hours/response target if committed, after-hours instructions, escalation owner, resource governance, language/accessibility paths, privacy/data-sharing agreement, withdrawal/correction process, and no-marketing/no-referral-fee policy.

11.2 Request routing matrix

Request category	Default destination	Partner action
Hospice bereavement	Bereavement team	Contact per program policy and user preference
Grief/social/family support	Social work, counseling-resource, or family-support queue	Provide appropriate support/resource navigation within scope
Chaplain/spiritual/cultural	Spiritual-care or approved community route	Contact per availability/preference
Practical support	Volunteer/resource navigation/community route	Share available options or arrange connection if offered
Employer/EAP/leave/benefits	HR/EAP/benefits queue	Explain available internal pathway, no legal/benefit determination through Zeporah
Insurer/member/beneficiary	Member/beneficiary/claims-support contact	Provide support contact/process information; no eligibility determination through Zeporah
Bank/retirement/wealth	Estate/beneficiary/client-support contact	Provide appointment/contact process; no financial advice through Zeporah
Attorney/legal aid/tax/estate	Directory/initial-contact or legal-information route	Provide contact/resource only; Zeporah gives no legal advice

Request category	Default destination	Partner action
Veteran/public/community/aging	Appropriate approved navigation route	Connect to verified resource where available
Funeral/memorial	Transparent resource contact path	Contact only with consent; no paid placement influence
Help who to contact	Resource-navigation/family-support queue	Guide to proper category without workspace access

11.3 Partner queue fields

Only approved request ID, category, Coordinator/requestor name, preferred contact method/time, language if selected, optional broad topic, optional message, timestamp, and program ID.

11.4 Partner cannot see

No stage/timeline, tasks, follow-up log, contacts, documents, questions, notes, dates, family identities/roles, access controls, resources viewed/saved/hidden, private support preferences, reminder activity, conflict information, or historical workspace content.

11.5 Partner status responses

Received; Acknowledged; Contact attempted; Connected; Referred; Closed—no longer needed; Closed—unable to reach; Closed—service unavailable. Only plain status returns to family; no staff notes/clinical/financial/legal/claims/internal detail.

12. Exceptions and edge cases

- **Family starts months after loss:** Permit direct start; no forced immediate-loss screens or timeline assumptions.
- **No known date of death:** Do not require it; no date prompts without user input.
- **No documents:** Allow questions/tasks/support only; never block workflow.
- **No professional contacts:** Offer configured directories/public/nonprofit resources; no assumed need/eligibility.
- **Task belongs to another family member:** Coordinator can assign task-only access; no authority inference.
- **Authority dispute:** Do not determine executor/legal authority; preserve privacy; offer professional question organizer/support route.
- **User uploads credential/ID information:** Warn; restrict standard storage per security policy; do not expose in notifications.
- **Wrong document/share recipient:** Immediate future-access revoke; audit; warn prior download cannot be undone.
- **Incorrect institution note:** Family can edit; preserve optional history; no external record affected.

- **Reminder causes distress:** Disable/change instantly; no explanation required.
- **Partner route unavailable:** Preserve draft; independent contact/alternative resource/retry later options.
- **No internet:** Secure local draft if supported; clear unsent state; never claim request or update sent without confirmation.
- **Low literacy/language/accessibility needs:** Apply preferences; plain language; assistive support; no inaccessible time-critical-only path.
- **Minor or authority unclear:** Follow product policy and do not assume legal authority.
- **Workspace archive/deletion request:** Apply retention/access rules; warn exports and external downloads remain outside platform control.

13. Data minimization, analytics, and acceptance criteria

13.1 Data minimization

Collect only items user elects to add: tasks, questions, contacts, documents, readiness status, family-entered follow-up notes, selected dates, remembrance items, resource preferences, and approved request fields. Do not require or infer death date, legal authority, claim number, account number, SSN, financial assets, debts, tax information, probate information, passwords, or clinical data.

Keep every new item private by default. Send only request-preview fields externally. De-identify/aggregate analytics where feasible.

13.2 Family measures

- Life-after-loss activation and return rate.
- One-next-step selection rate.
- Deferred/hidden item return rate.
- Task create/delegate/complete/reopen rate.
- Document/contact readiness and intentional sharing rate.
- Professional-question organizer use.
- Support resource save/hide/independent contact/connection request rate.
- Difficult-date reminder opt-in/disable rate.
- User-reported clarity, control, privacy understanding, practical burden, and support usefulness.
- Archive/keep-space choice rate.

13.3 Organization measures

- Voluntary support/professional-connection request volume/category.
- Request completeness and minimum-data rate.
- Partner acknowledgment/connection time.
- Family satisfaction with navigation and respectful support.
- Resource relevance/availability/referral completion rate.
- Repeat nonclinical contact volume where lawfully/ethically measurable.
- Staff-reported appropriateness and reduced navigation burden.

13.4 Privacy and safety measures

- Item-level permission preview rate.
- Document access/change/revocation events.
- External request share-preview/consent rate.
- Request withdrawal/correction rate.
- Resource hide/opt-out rate.
- Reminder disable/change rate.
- Unauthorized-access attempts.
- Sensitive-data warning display rate.
- Audit completeness.

13.5 Required audit events

- life_after_loss_pathway_opened

13.6 Acceptance criteria

Workflow 6 is ready for pilot only when:

1. Family can begin directly at any point after loss without completing prior workflows.
2. First entry provides pacing and one-next-step selection, not a universal estate/administrative checklist.
3. Workflow clearly states Zeporah does not provide legal, tax, financial, investment, insurance, benefits, claims, or emergency advice.
4. Families can organize questions and information for professionals without the app answering professional questions or making claims decisions.
5. Every task, contact, note, document, date, and resource choice is private by default and can be shared granularly.
6. Helpers can be given task-only/item-only access without broader workspace visibility.
7. Institution follow-up organizer never contacts institutions or represents an authoritative legal/claims record.

8. Grief, spiritual, practical, and difficult-date support remains optional and family-controlled.
9. Support recommendations are transparent, need-led, and not influenced by paid placement, referral fees, sponsorship, or lead sales.
10. Every external request uses recipient-specific, field-specific consent and sends only approved data.
11. Partners receive no ongoing workspace access and return only limited status.
12. Archive/export/access review controls work with authentication, retention rules, and clear external-copy warnings.
13. Workflow preserves earlier tasks, contacts, documents, preferences, permissions, and request history under existing scope.
14. Mobile, accessibility, low-bandwidth, plain-language, notification, audit, and pilot measurement requirements are met.

14. Workflow integration and handoffs

14.1 Integration purpose

Workflow 6 is the long-horizon continuation of Zeporah's family journey. It brings together bereavement support and practical life administration without converting Zeporah into a legal, financial, tax, claims, or probate service. It receives the family's existing workspace, permissions, selected information, tasks, contacts, documents, support preferences, and history, then lets the family decide what to keep active, defer, share, archive, or revisit.

Workflow 6 does not "end" the family's journey at a prescribed date. It provides a durable, private family space that may remain active, be partially archived, or be revisited when the family chooses.

14.2 What enters Workflow 6

Entering object/context	Source	How Workflow 6 uses it
Workspace ID and authenticated user	Workflow 1/shared platform	Associates later tasks with correct private family space and validates current access
Current roles and permissions	Workflow 1; updated through Workflow 3	Controls view/create/edit/share/delegate/archive/export access
Privacy baseline and item-level settings	Workflow 1/3	Applies private-by-default to new later-stage items and preserves historical scope
Journey state/recent-loss context	Workflow 5 or direct user selection	Sets family-facing tone/pathway; no external disclosure or required death date
Contacts	Workflows 2, 3, 5	Reuses permitted care, bereavement, family, professional, employer, insurer, institution, and practical contacts

Entering object/context	Source	How Workflow 6 uses it
Tasks and task status	Workflows 2, 3, 5	Carries active/deferred/completed tasks forward under original sharing/ownership
Questions, family-entered notes, values, arrangement/remembrance items	Workflows 2, 5	Makes permitted items available as private context or optional later reference; not professional advice or external disclosure
Documents and access metadata	Workflow 3/5	Organizes selected documents under current item-level access; does not interpret them
Preserve-for-later items	Workflow 5	Surfaces only when family chooses or selected revisit timing occurs
Pause/reminder/hide preferences	Workflow 4/5	Keeps pacing, quiet periods, and support controls consistent
Difficult-date preferences	Workflow 5 or direct entry	Offers user-controlled reminders/support; never infer dates
Support needs/preferences/resource history	Workflows 1–5/shared recommendation service	Tailors optional resources and suppresses hidden ones; no automatic referral
Partner connection/request pathways	Workflow 1/partner configuration	Enables voluntary support request options only
Prior request summary/status and consent audits	Shared system layer	Shows family status/history; never reuses consent for new disclosure

14.3 What Workflow 6 creates or updates

Object/setting	Created/updated	Default visibility	Controller
Life-after-loss priority	Current chosen area	Coordinator only	Coordinator
First-year pathway preferences	Hidden/shown sections, chosen pacing, user-selected time view	User/Coordinator	Coordinator/user
Information readiness item	Status of locating/organizing information	Coordinator only	Coordinator/authorized Co-Coordinator
Professional conversation organizer	Conversation type, questions, selected materials/status	Creator/Coordinator	Creator within scope; Coordinator controls sharing
Practical life task	Household/institution/dependent/property/belongings task	Coordinator only	Coordinator/authorized Co-Coordinator
Institution follow-up log	Family-entered contact/next-step note	Creator/Coordinator	Creator/Coordinator under permissions
Difficult date/remembrance item	Date, reminder, personal note/photo/story, optional check-in request	Coordinator only	Coordinator/user
Resource engagement	Save/hide/contact independently/request connection	Private user/Coordinator context	User/Coordinator

Object/setting	Created/updated	Default visibility	Controller
External support/professional request draft	Recipient/category/contact preference/message	Coordinator only	Coordinator
External-request consent	Recipient, fields, time/version, request ID	System audit	System-managed
Archive/export/access-review choice	Items archived, active, exported, permissions changed, reminders disabled	Item/user scope	Coordinator/authorized user

14.4 What Workflow 6 sends forward

Workflow 6 is the final numbered workflow, but it still sends data and capabilities into the persistent Zeporah family space, shared services, and earlier workflows when the family revisits them.

Object/capability available after Workflow 6 activity	Destination	Conditions/use
Updated tasks, contacts, documents, questions, and permissions	Persistent family workspace / Workflow 3	Continued coordination under current access
Saved professional question organizers	Family workspace; relevant future conversation path	Private unless explicitly shared; not automatically sent
Institution follow-up logs	Family workspace	Family reference only; not authoritative external record
Difficult-date/remembrance items and reminders	Persistent family workspace / reminder service	User-controlled; not shared by default
Saved/hidden resource history	Recommendation service across family space	Tailors later suggestions; remains private
Submitted support-request status	Family workspace / Workflow 4 status view	Family sees limited status; recipient sees only request
Archive choices and export history	Archive/access service	Governs what is surfaced; subject to retention and access rules
Updated roles/access changes	Workflow 1 governance service	Applies across all current and future objects
Reopened serious-illness/care context	Workflow 2, if family intentionally accesses prior care information	Existing permissions remain enforced
Reopened immediate-loss or coordination context	Workflows 3–5	Family may revisit under existing scope; no automatic reactivation

14.5 What remains private or inactive

- Later-stage priorities, professional questions, follow-up logs, difficult-date reminders, resource browsing/saving/hiding, and archive choices remain private unless explicitly shared.

- A helper only sees the specific task, contact, document, update, or reminder request that the Coordinator grants; no broad administrative access is implied.
- Documents remain private and are never automatically sent to an insurer, bank, attorney, employer, court, government agency, or partner.
- A professional-question organizer never becomes a request, claim, appointment, or legal/financial instruction without the user choosing separate action.
- Institution follow-up notes do not contact an institution, sync account status, establish authority, or prove compliance.
- A difficult date does not create a reminder or notify another person unless user explicitly configures it.
- Resource recommendations do not create referrals, leads, commercial payments, or partner notifications.
- A submitted external request does not give the recipient ongoing access to future tasks, documents, questions, dates, family history, or workspace.
- Past consent is never reused for a new external request, even to the same organization.
- Zeporah does not automatically close/archive the workspace at 13 months or any other date.

14.6 What triggers another workflow or service

Trigger in Workflow 6	Resulting workflow/capability	Required continuation behavior
User creates/assigns task, shares update, contact, document, or reminder request	Workflow 3 coordination	Maintain item-level scope; task-only delegation where appropriate
User pauses, hides task, task feels too large, lacks help, needs grief/practical support	Workflow 4 compassionate pause/support	Save context; offer smaller step/delegation/support; no automatic contact
User requests professional, benefits, insurer, bereavement, EAP, legal-information, or other support	Consent-based connection service governed by Workflow 4	Exact recipient/data preview; explicit consent before send
User opens prior care information, question, contact, or hospice resource	Workflow 2 or preserved care context	Show only permitted historical information; no new sharing
User opens immediate-loss arrangement/remembrance item or task	Workflow 5 or preserved recent-loss context	Restore item at current scope; no automatic notifications
User changes roles/access or reviews archive permissions	Workflow 1 governance service	Apply updates to active and future items according to policy
User archives/exports/removes items	Archive/access service	Require authentication; show external-copy/retention implications
Partner sends request status	Workflow 4 status view / family dashboard	Show plain status only, no staff notes/details

14.7 What the family sees

Families never see “Workflow 6,” “handoff,” “module,” or technical lifecycle labels. They see language such as:

- “One step at a time.”
- “What would be most helpful today?”
- “Keep important information together.”
- “Prepare for a conversation.”
- “Choose one practical responsibility.”
- “Dates and moments that matter.”
- “Support that may help right now.”
- “Your family space, your choice.”

Examples of seamless continuation:

- After saving professional questions: “Your questions are saved privately. You can add more, share them with someone you trust, or return later.”
- After deferring a task: “This can wait. You can bring it back whenever you are ready.”
- After setting a difficult-date reminder: “You chose when and how Zeporah should remind you. You can change this anytime.”
- After a support request: “Your request was sent. While you wait, you can return to your family space or choose another small step.”
- After archive review: “Your family space remains yours. You can keep it active, archive selected items, or return when you need it.”

Zeporah should feel like a durable, private next-of-kin operating system, not a 13-month program with a forced endpoint.

14.8 What a partner sees

A partner sees only a family-approved, recipient-specific request. It may receive request ID, request category, Coordinator/requestor name, preferred contact method/time, language if selected, optional broad topic, optional user message, timestamp, and program ID.

A partner does not see life-after-loss priority, timeline, stages, task lists, follow-up logs, questions, documents, contacts, family member identities/roles, access settings, difficult dates, remembrance items, resource browsing/saving/hiding, reminder settings, family conflict, archive/export choices, historical care-plan content, or general audit history.

Partner may return only limited status: received, acknowledged, contact attempted, connected, referred, closed—no longer needed, closed—unable to reach, or closed—service unavailable. Zeporah does not display partner staff notes, legal/financial/insurance conclusions, claim status details, or internal operations in the family workspace.

15. Persistent-space continuation after Workflow 6

Ongoing family workspace

After Workflow 6, the workspace remains available according to account, retention, and applicable legal/privacy policy. There is no automatic closure at one year.

The Coordinator may:

- Continue using task, contact, document, update, support, and remembrance tools.
- Archive selected items from daily view.
- Change or revoke family access.
- Turn reminders on or off.
- Export information within current permissions.
- Delete selected personal content where permitted.
- Return to earlier care, immediate-loss, coordination, or support areas when useful.

Family-facing continuation

“Your family space is still here. You can return when you need to, keep what matters, and leave the rest for later.”
